"We are very happy with the service that our co-op has provided with this monitoring system. We have not had to call for fuel since the monitors were put on our tanks. We also enjoy not having to pay for the fuel right away. We farm about 1,600 acres of corn and soybeans a year, and also custom combine another 1,900 acres. During harvest it is vital that our fuel is there when we need it."

Carl and Steve Schinke
Shiocton, WI

"I have contracted in the past, but with the Cenex Fuel Delivery System, the average monthly pricing helps take the volatility out of purchasing fuel. Before the automated delivery, I would get a fill and it seemed like every time the price would drop a few more cents the next day. I would be stuck with all that fuel in my tank at the higher price. Now it is nice not having to worry about that."

Neil Schonscheck
Oshkosh, WI

"I am very pleased with the Cenex Fuel Delivery System. It allows us the flexibility to purchase fuel as we use it or buy the whole tank if we want. I never worry about having fuel when we need it. The system works flawlessly!"

Jeff Cordell
Newton, KS

Getting premium fuel has never been easier.

If you haven't already upgraded from standard diesel fuel to Ruby Fieldmaster® Premium Diesel Fuel, now is the time. Rigorous testing has proven Ruby Fieldmaster to deliver a 4.5% increase in power compared to standard #2 diesel.

- More Power
- Better Fuel Economy
- Longer Engine Life

A BRAND OF **CHS**

When you're working 16-hour days, who has time to worry about ordering fuel?

**OUR ENERGY'S
THERE WHEN
YOU NEED
IT MOST.**

With the Cenex® Fuel Delivery System, your tank is automatically refilled so you always have a reliable supply of fuel on hand.

Imagine never having to check your tank or bother with fuel orders. You'll appreciate the peace of mind that comes from knowing your critical planting and harvesting work – and everyday tasks such as livestock feeding – won't be disrupted or delayed because you're short on fuel.

Feature	What is it?	What it means to you
Automated Delivery	An electronic monitoring system is installed in your bulk fuel tank. When the fuel drops below your predetermined level, the monitor sends a signal to our fuel distribution center, and we route the nearest delivery truck to fill your tank.	Increased Productivity – No more checking tanks, calling in orders or waiting for delivery. Your fuel is there when you need it most.
Deferred Billing	Each month, the monitor in your tank estimates the amount of product you have used, and you are billed for that amount, even though your tank is kept at a predetermined level.	Improved Cash Flow – Because you don't have dollars tied up in fuel that is just sitting in your tank, you have cash on hand for other business.
Average Monthly Pricing	A valuable risk management tool. Rather than paying the price posted on the day the fuel was delivered (or used), you'll be charged the average price for that entire month.	Reduced Price Volatility – Average Monthly Pricing can substantially reduce your price risk. You don't need to worry about what the market will do next, or wait to order in hopes that fuel prices will drop.
High Performance Products	Cenex delivers top quality fuels that keep your equipment in top shape including Ruby Fieldmaster® Premium Diesel Fuel.	Peace of Mind – Take comfort in knowing you're getting a top-quality, proven product from people you can depend on.
Online Tank Monitoring	Authorized users in your business can log onto cenex.com to access tank level information, average fuel usage and historical fuel usage at any time, right from a desktop.	Information at Your Fingertips – You're better equipped to manage fuel inventory and anticipate future needs. This online feature is especially convenient if you have fuel tanks at several locations.

All it takes is one simple phone call.

We'll remember when it's time to fill your tank so you don't have to. Call today to get started with the Cenex Fuel Delivery System!

Tank monitoring devices are not used for the purpose of metering gallons out of a storage tank. The monitor in your tank is designed and used for determining tank levels, calculating the rate of usage, planning deliveries, and estimating volumes due for deferred payment. The actual purchase of product takes place at the time of delivery to the tank with the precise volume established by the delivery truck meter, approved by the National Type Evaluation Program, "NTEP".
